

Today's Generation At Risk

"Between 2010 and 2020 the U.S. teen population will swell to 44 million. These are Generation Y, also known as the 'millennials' (born in 1981 or later). They have a different culture, different vocabulary, and different media preferences. They have no patience with passive learning....They insist that school and work must be more like play, and don't expect them to play without an immediate payoff....at least 50% of the student population is leaving school completely unprepared for either skill-based work or responsible citizenship."

- Edward E. Gordon Author of 2010 Meltdown

Engaging The Audience

C-Tech, a leading provider of short-term training programs, has assembled a technology track designed to engage At-Risk Youth. These programs are being used throughout the country to train individuals for today's technical workforce.

Program Features:

- Easy To Understand Curriculum
- Written on a 7th grade reading level
- Cross-Curricular
- Portable Training Equipment
- Hands-on Learning
- Team Participation

Resulting In:

- Higher Self-Esteem
- Industry-Recognized Certification
- Career Opportunities in Multiple Industries
- Above-Average Wages
- Transferable skills

Confidence: If You Build it, They Will Learn!

"When we are in C-Tech classes, I have never seen my students so hungry to learn, soaking up information like a sponge. It makes the student hungry for more and wanting to accelerate to even higher levels of education."

- Kenneth McCoy, Certified Instructor, John Shero State Juvenile Facility

"I took the cable networking because I was interested in hands-on activities, and for job openings back home. I plan to own my own cable company in the future."

- Joseph Brown, Certified Network Cabling Specialist, Former U.S. Job Corps Student

Opportunities Are Everywhere!

Today's world could not exist without the telecommunication technology infrastructure supporting the networks that connect us at work, home or virtually anywhere. Some type of connectivity is necessary to purchase groceries at the supermarket, withdraw funds at an ATM, send an email, watch a movie, or place a telephone call. As the world becomes more connected with each passing minute, industries like cable, electrical, computer networking, and telecommunications scramble to find skilled installers. National and local employers are finding that applicants don't have the necessary skills to be hired, and many need remedial training. Find out how to offer this exciting training program to your population. Call us at 973.726.9000 or visit us on the web at www.ctechprograms.com
